

In a area as sacred as a place of worship, where a person's personal faith takes an essential place, it is more than important to guarantee an optimal listening system for the hearing impaired. Installing an induction loop system will allow hard of hearing people to capture an audio source, directly into their hearing aid, free from background noise.

## Prayer areas

### STEP

# 1

In a space where echoes fill the room, yet silence is essential, improving your visitors' prayer experience means installing a magnetic induction loop system.

#### Our recommandation:

- LD system

### STEP

# 2

## Guided tours

Because places of worship are also historical and cultural monuments, many people come to visit them, including people with hearing impairments. It is therefore essential to ensure optimal listening so as not to exclude them from the group.

#### Our recommandation:

- UHF system

## Confessional

### STEP

# 3

In this space dedicated to an intimate exchange about the faith of a hearing impaired person, hard of hearing people should understand the conversation without any constraints and noise around them.

#### Our recommandation:

- DCL20
- eLoop

### STEP

# 4

## Evacuation

In case of alarm in an emergency situation, hard of hearing people should receive the right information in real time in their hearing aids without any constraints and without any constraints.

#### Our recommandation:

- LD amplifier 100 volt
